

Fatimah Elteliny

Governance, internal audit and management systems – building the control infrastructure of Saudi institutions, and getting it certified.

A governance framework is only real if it survives an external auditor. My work runs the full arc – current-state assessment, risk registers, policy architecture, process design, KPI regimes – and then stands behind it through internal audit, external audit and certification. I do not deliver documents. I deliver systems that hold.

Total quality management and performance monitoring for the national beneficiary support system

CLIENT

National Government Resource Management Centre – E'timad

ROLE

Lead Consultant

OUTCOME

ISO 10002 + 10004 certified

SAUDI ARABIA

Led a two-year engagement taking the beneficiary support and enablement function of Saudi Arabia's national procurement platform from unassessed to internationally certified – and then kept it certified through surveillance.

- **Assess.** Current-state assessment and gap analysis against ISO 9001, ISO 10002, ISO 10004 and the COPC standard.
- **Design.** Policies and procedures, customer journeys, satisfaction survey instruments, risk and compliance registers, KPI framework, reporting architecture and CRM improvements.
- **Prove.** Tested the designed system, ran the internal audit, then took it through external audit with TÜV – certifying to ISO 10002 (complaints management) and ISO 10004 (customer satisfaction) on the first cycle.
- **Sustain.** Supported a full second year of corrective action plans and improvements, ran a second internal audit, and passed the first surveillance audit.

مشروع تقديم خدمات استشارية في إدارة الجودة الشاملة ومراقبة الأداء لمنظومة دعم وتمكين المستفيدين

Rebuilding the internal governance model of a sovereign decision-support institution

CLIENT

Decision Support Centre – Royal Court affiliate

SECTOR

Sovereign

SCOPE

Governance model rebuild

Delivered a complete governance architecture for an entity affiliated with the Royal Court, aligned to ISO 37301, ISO 37000, COSO ERM and OECD principles – the tier at which governance is not documentation but the mechanism that makes decisions defensible.

Constitutional layer

Governance charter; board and board-committee executive bylaws; committee charters; approved delegation-of-authority matrix.

Policy architecture

Full policy and procedure manual, plus a policy suite spanning data governance, data quality, data classification, open data, data sharing, freedom of information, personal data protection, e-signature, conflict of interest and disclosure, external representation, publishing, and a policy-on-policies.

Integrity layer

Anti-fraud and whistleblowing policy; approved code of professional conduct.

Operating layer

RACI matrices across the cybersecurity, administrative & financial, e-transactions, promotions, grievances, conduct-investigation and accrual-accounting committees; strategy and business-plan governance; departmental KPI framework.

Compliance universe

Consolidated register of every law, royal decree, regulation and instruction applicable to the centre.

Governance and operating model for the ministry's emergency & crisis management centre

CLIENT

MoMRAH – Ministry & Municipalities

SECTOR

Government

SCOPE

Crisis management – governance & establishment

Worked across the governance and establishment phases of the crisis-management programme spanning the Ministry and the municipalities — the function that has to work on the worst day, which means it has to be designed for the worst day.

- **Phase 1 – Governance & current state.** Reviewed the centre's strategy, existing governance system and organisational structure; benchmarked against local, regional and international bodies; built a comprehensive current-state picture; developed the initial risk registers that surfaced the critical gaps.
- **Phase 2 – Establishment.** Designed and built the target model: service catalogue, organisational structure, policies and procedures, governance framework, human capability requirements and technical requirements.

Enterprise risk assessment and three-year internal audit plan

CLIENT

Aldrees Industry & Mining

SECTOR

Private / Industrial

SCOPE

Enterprise risk & 3-year audit plan

Ran risk identification workshops and built complete risk registers across **20 departments**, assessed mitigations and controls, then translated the risk picture into a prioritised three-year internal audit plan — sequencing audit effort against where exposure actually sits rather than where it is easiest to look.

تقييم المخاطر ووضع خطة التدقيق الداخلي لمدة ثلاث سنوات

Internal audit advisory: risk registers and three-year audit plan

CLIENT

Naqi Water

SECTOR

Private / FMCG

SCOPE

Internal audit advisory

Full risk assessment and risk register build across **14 departments** of the bottling business, culminating in a risk-based three-year internal audit plan. Delivered on the same methodology as Aldrees — evidence that the approach is a repeatable system, not a bespoke one-off.

مشروع تقديم الخدمات الاستشارية لأعمال المراجعة الداخلية

Procedural manual: 75+ process maps for a national arbitration body

CLIENT

Saudi Real Estate Arbitration Centre

BASIS

Independent engagement

SCOPE

Procedural manual

Authored over **75 process maps** in Visio and consolidated them into a single procedural manual — a comprehensive guide to the procedures, processes and requirements for using the Centre's arbitration services. Delivered within a compressed timeline and approved without major revision cycles. The manual is the operational front door of the institution: if a party cannot follow it, they cannot access arbitration through it.

الأدلة الإجرائية

Core Capabilities

Governance Architecture

Governance charters, board and committee bylaws, delegation-of-authority matrices, RACI frameworks, policy suites, compliance universes. ISO 37301 · ISO 37000 · COSO · OECD.

Enterprise Risk & Internal Audit

Risk workshops, risk registers at department-by-department depth, control assessment, and risk-based multi-year internal audit plans. Audit execution and corrective action tracking. ISO 31000.

Management Systems & Certification

ISO 9001, 10002, 10004, 22301 and COPC. Gap analysis through design, testing, internal audit, external audit and certification – then surveillance and corrective action.

Process Architecture

End-to-end process mapping, BPMN workflows and procedural manuals at scale. Visio. 75+ mapped processes consolidated into a single operable document.

Performance Management

KPI frameworks, Balanced Scorecard, executive dashboards and operational reporting. Power BI. Measures designed to change behaviour, not merely describe it.

Quality & Customer Experience

TQM systems, customer journeys, complaint-handling charters, satisfaction measurement, root-cause analysis, CRM improvement – certified to ISO 10002 and 10004, not asserted.
